產品特點

Product Features

調濕性 Humidity Regulation

當室內濕度上升時，會吸收空氣中濕氣，當空氣乾燥時釋放出來，避免突然的濕度變動。

Regulate humidity by absorbing moisture when humidity is high and releasing moisture when humidity is low.

吸著分解 Absorb and decompose

甲醛等有害氣體先被吸著後再被光觸媒分解為無害物質，不會重新釋放回空氣中。

Harmful gases like Formaldehyde are absorbed by diatomaceous earth and then decomposed by photocatalyst. They will not release again into the air.

空氣淨化 Air Purification

有效過濾室內空氣中之有害氣體，例如惡臭、VOC和甲醛等。

Effectively absorbing harmful gases like bad smell, VOC, formaldehyde in the air.

防止結露 Dew Prevention

防止結露 (倒汗水) 在牆壁和玻璃窗表面形成，防霉效果優越。

Prevent dew formation on wall and window. Help to avoid mold growth.

不含 VOC Non VOC

VOC 含量接近零*。

VOC content near zero*.

*天然物料亦含微量 VOC。

*Natural raw material also contains minimal VOC.

隔熱性 Thermal insulation

由於珪藻土導熱系數低，保溫隔熱功效好。冬暖夏涼。

Low thermal conductivity and good heat insulation.

防火性 Fire Resistant

耐火性高。萬一火災時也不會產生有害濃煙。

Highly fire resistant and will not release dense smoke.

款式多樣 Variety of texture

備有多款紋理工法做出不同風格。

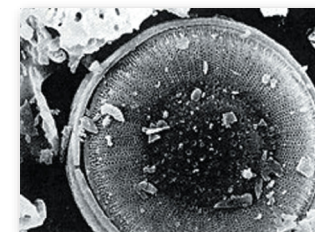

Variety of finish textures and patterns.

產品資料

Product Information

珪藻土 Diatomaceous earth

珪藻土是水中的珪藻植物在死後堆積形成的一種化石性積土。珪藻土是天然材料，不含有害化學物質，其微細孔比木炭還要多出 5000 到 6000 倍，除了具有不燃、隔音、防水、比重輕以及很強的隔熱性之外，還具有除濕、除臭、淨化室內空氣等多種作用，是十分優良的環保型室內裝修材料。

珪藻土 Diatom

Diatomaceous earth is the deposit of the fossilized shells of diatoms, which are one-celled plants in waters. Its surface has micro-pores 5000 to 6000 times more than char coal. Beside non-combustible, sound insulating, waterproofing and thermal insulating, it also has the properties of moisture adsorption, odor removal and air purification.

珪藻土 Diatomaceous earth

藤原環保潔F系 Eco-Plus F Series

包裝 Packing	18公斤 18kg
理論施工度 Coverage	約5平方米/公斤/層 Around 5m ² / kg / coat
漆油系統 System	兩層 *如底層粉化，應先塗上底漆。 Two coats * If the substrate is dusty, coated with primer finish. 可使用油輥或噴槍。 Applied with paint roller or spray gun.
